

Watercolor Magnets

 20 Minutes

Instructions:

1. Paint your paper with a few spots of water, about the size of your beads.

(Wetting the paper first will help blend the colors together and help give a geode look.)

2. Add a few small drops of different colored watercolors to each spot of water.
3. Delicately swirl the colors, but be careful not to over mix the colors.
4. While it's still wet, sprinkle on some salt, it leaves great texture.

5. After the paint fully dries lightly rub the salt off.
6. Using a pencil, trace a flat glass bead around each spot of color on your paper.

Optional: Add some details with a colorful gel pens for a little extra sparkle.

7. Paint mod podge on the flat side of your beads and tightly press them on top of each traced spot of color.

8. Wait for the mod podge to dry.
9. Cut around each glass bead and add a magnet to the flat back of it with glue.
10. When the glue dries, place your magnet on the fridge or your locker!

OVERVIEW

Make your own magnet!

SUPPLIES NEEDED

- Clear flat glass beads
- Magnets
- Paper
- Water
- Paint brush
- Watercolor
- Salt
- Pencil
- Optional: Gel pens
- Mod podge
